Blog is not clickable

Some blog thumbnail is missing

Problem:-

- 1. Website is new**
- 2. Domain Authority is low**
- 3. Backlink is low**
- 4. Enough blog is missing**
- 5. Social media present is weak**
- 6. Main pages is not index**
- 7. Website speed is low**

Action:-

- 1. You must publish high-quality blog posts daily, incorporating the right keywords, thumbnails, titles, and descriptions, while ensuring they are optimized for AEO (Answer Engine Optimization) and GEO (Generative Engine Optimization).**
- 2. To build quality backlinks, you need to remain active on high-domain-authority platforms—such as Quora, Medium, and Pinterest—and focus on creating valuable content.**
- 3. You must identify and fix key issues to maintain optimal website speed.**

- 4. Ensure that the website's main pages are properly indexed.**
- 5. Create a specific content calendar and follow it consistently to increase the website's visibility.**

AEO Optimized

You don't need to do much; simply incorporate tables, bullet points, and an FAQ section into the content. Also, make sure to provide a summary of the entire piece within the first 3–4 lines, and include at least one table on each page.

GEO Optimized

You must accurately list all your details on the website; it is essential to include the category and author name for every blog post. Additionally, you need to increase brand visibility across social media channels by consistently using the same color scheme and brand voice, and you must add organization schema to the website.
